## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims I-24, drawn to a method for reducing leakage current across a circuit component, classified in class 327, subclass 427.
- II. Claims 25-40 and 78-85, drawn to a driving circuit, classified in class 327, subclass 108.
- III. Claims 41-69, drawn to a reconfigurable device, classified in class 327, subclass 565.
- IV. Claims 70-77 and 86, draw to a method of placing a circuit into a standby state, classified in class 365/226.

Invention Groups I-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Groups I-IV has separate utility such as driver circuit, digital circuit or memory circuit .... See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2816

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
